Procedure for TopSky Strip Printer Print Queue Purge Script

Synopsis:

To conserve strip paper, strip printers are manually switched to OFFLINE mode when idle and back to ONLINE as needed. While OFFLINE, the TopSky workstations hold all pending print jobs for the paper strips. However, once the printer is set to ONLINE, it automatically processes the accumulated print queue, often resulting in the printing of unnecessary strips. To prevent this, a script must be executed by technical staff to clear the backlog before the printer is manually activated to ONLINE mode.

Procedure:

A. Script Execution

1. Login to the **DBM** node (DBMS) as user **system** and open an Xterm window
2. The directory shall be **/usr/system** or simply, type "cd" and press Enter

Or alternatively,

1. Login to the **TKS** node (RCMS) as user **system** and open an Xterm window
2. The directory shall be **/home/system**, and if not already in there by default, type "cd"

s. type "ls" to list all the files.

Then,

3. Locate the script called **clrstripq**
4. Execute the script at shell prompt like so: **./clrstripq**

```
maerdbm01sv:system > ./clrstripq
```

TopSky Strip Printer Print Queue Purge Script

The following screen shall be displayed:

This script will clear Strip Printer Queue jobs from the selected workstation.
Select one from AIRLOG, OCEANIC, APPROACH, SIMU, TOWER position.

You are running this script from maerdbm01sv.

Would you like to Verify and Clear the Strip printer queue on:

- L. LIST ALL QUEUES FOR ALL STRIP PRINTERS
- 1. AIRLOG1
- 2. AIRLOG2
- 3. OCEANIC Assistant
- 4. APPROACH Assistant
- 5. SIMULATOR Assistant
- 6. OCEANIC
- 7. APPROACH
- 8. SIMULATOR
- 9. TOWER1

Enter one of the options above, or type 'q' to quit: 1

B. Recommended usage

Before strip printer transition from OFFLINE to ONLINE mode, it is essential to confirm that there are no pending print jobs in the backlog.

Press L to list all queues

To view the print queues in the strip printer buffers across all machines, type "L" or "1" option from the menu.

Page 4 of 6

TopSky Strip Printer Print Queue Purge Script

C. Clear strip printer's buffer

The strip printers are physically connected to the following workstations:

- Airlog1 (HF Operator section)
- ATC Assistant (also referred to as PLC or Planner position) independently working with Executive positions on the Oceanic (OCA), Approach (APP), and Simulator (SIM) consoles
- Tower1 (Tower node)

The executive controller's workstation accesses the strip printer through the assistant nodes. Similarly, Airlog2 utilizes the strip printer through Airlog1.

To ensure the strip printers are ready for use, it is crucial to clear the printer buffers on both connected sides as the print queue is shared.

- i. For the AIRLOG printer, clear both Airlog1 and Airlog2's logs.
- ii. For the OCA PLC printer, purge both OCA executive and assistant logs.
- iii. For the APP PLC printer, ensure both APP executive and assistant logs are cleared.
- iv. For the SIM PLC printer, both SIM executive and assistant logs should be purged.

This approach guarantees that the strip printers are free from any backlog, and shall print unnecessary paper strips once brought ONLINE.

To clear (purge) strip printer's buffer containing printing jobs, for instance on airlog1,

execute the script

```
maerdbm01sv:system > ./clrstripq []
```

and , select **1** from the list below:

**This script will clear Strip Printer Queue jobs from the selected workstation.
Select one from AIRLOG, OCEANIC, APPROACH, SIMU, TOWER position.**

You are running this script from maerdbm01sv.

Would you like to Verify and Clear the Strip printer queue on:

L. LIST ALL QUEUES FOR ALL STRIP PRINTERS
